Biography of Léo Briand, founder and CEO of Vittascience

Léo Briand is co-founder and president of Vittascience. He holds an aerospace engineering degree from ISAE-SUPAERO in Toulouse, a master's degree in Technological Innovation and Entrepreneurship from École Polytechnique, and completed the Learn2Launch program in Innovation and Entrepreneurship at the Haas School of Business at Berkeley, University of California.

Passionate about education and science, Léo Briand imagined Vittascience in 2015, a platform for learning programming and AI whose aim is to pass on a taste for science and innovation to future generations, while combating the stereotypes present in digital professions.

At the time, he was tutoring students alongside his studies, which made him aware of the need for science education and the positive impact it can have. The idea of entrepreneurship appealed to him, so he decided to combine his passion for science with his taste for entrepreneurship and social openness.

Today, Léo works full-time on the development of Vittascience and is committed to helping the educational community promote science.

Léo is also vice-president of AFINEF, an association whose mission is to promote and develop the digital sector for education and training in France and abroad, and a member of the executive committee of Class'Code, an association that promotes digital science in schools.
